

THE BEAUTY OF RECLAIMED TIMBER

Each piece of reclaimed furniture has its own story to tell. Every bump and groove a tell-tale sign of a previous life.

Recycled timber from old house and boat building material, gives this furniture a unique and individual charm.

No two pieces are ever identical and the beauty of owning one of these exquisite items is to have a totally exclusive and unique piece of furniture in your home.

- Cracks and splits may occur in recycled timber, this is perfectly normal with this type of material and may occur as the product ages within the home. You may even find areas of wood filler and infills on your reclaimed furniture, including table tops and doors.
- The colours on the timber will vary from piece to piece – this is part of the rustic charm of these beautiful collections.
- The uniqueness and beauty of this natural product may also display the following characteristics.
 - Nail marks
 - Dents
 - Scratches
 - Bore Holes
 - Cracks and splits

All signs of a beautifully hand-crafted product of nature.

Care Instructions

- Reclaimed furniture is not waterproof, heat resistant or immune to chemicals. Do not put hot dishes or cups on any surface, always use an insulated mat for protection.
- Don't use a protective cover containing rubber derivatives – it could react with the finish.
- Dining tables should not be placed directly in front of a heat source, such as a radiator or underfloor heating as this will cause the humidity in the wood to drop resulting in some cracking.
- Wooden products change colour with exposure to both natural and electric light. Rotate any ornaments to avoid patches of colour where an object has stood.
- Sharp objects such as cutlery and pans can score the surface of your furniture, as can crockery being dragged across the top.

Cleaning Instructions

- Spills should be removed immediately by dabbing the area using a clean damp cloth. Do not rub across the surface as this will damage the finish to the top of the table or cabinet.
- We recommend cleaning with a damp cloth followed by a dry cloth. Never use vinegar, lemon juice or other cleaners containing acids, scouring powders or cream cleaners, which may contain abrasives.
- Should you wish to apply a protective finish to your table, please apply a light coat of Osmo Wood Wax or Isoguard Natural Finish. Both products available on the internet.

If your furniture becomes stained, scratched or chipped, or suffers other damage we recommend the following action.

- Coloron Wood Dye
Various colours are available to match the colour of your table. Simply follow the application instructions and then finish with a coat of Colron Refined Finishing Wax.
- Ronseal Multi-Purpose Wood Filler
Ideal for filling in cracks and splits and is available in various colours to match the finish of your table or cabinet. Once again follow the application instructions for best results.
